

## AVerMedia INFORMATION Inc. Safeguards GAU Dormitory in North Cyprus

**Taipei, Taiwan, March 26, 2010-** As always, GAU has turned its promise and pride into actions. A promise that guarantees a friendly and safe learning environment; a pride that claims its world-class status of mixed student body composed of international students from nearly 60 countries whom are required to stay at University dormitory for the first year; and an action that upgraded its security to maintain such guarantee.

AVerDiGi SEB5116 LITE 16CH Embedded DVRs have been selected and installed throughout the dormitory. The AVerDiGi SEB5116 LITEs are responsible to store surveillance data from 80 cameras. The cameras were mainly placed at entrances and exits to the dormitory, at risk areas such as poorly lit walking paths and locations where students and faculty might find themselves alone and defenseless, and at parking lots for suspicious activities.

### System Structure

AVerDiGi SEB5116 LITE Embedded DVRs were placed in a rack cabin in the system room where only authorized personnel has access to the surveillance hardware. Adjacent to the protected pile-up DVRs is the security room where AVerDiGi CM3000 software integration was installed to combine all live surveillance images for monitoring by security staffs. The separation between the storage and monitoring ensures surveillance data is well protected should any incidence occurred and police investigation assistance needed. More importantly, the connection between DVRs and security control center adopted fiber optic for seamless surveillance data transfer.

To replace the outdated surveillance system, AVerMedia INFORMATION Inc. cooperated with local partner to present the unique features of AVerDiGi SEB5116 LITE and CM3000 Integration Software that dominantly superior than the features of former system. The DVRs have been a great assistance to the school security staffs by providing 16 CH real-time recording and displaying, and individual adjustable frame rate and resolution for key areas. Moreover, through network connection to the CM3000, the entire system has been able to provide real-time alarm notification and 64 sets(Max.) of alarm settings, Two-level of user access (Administrator and operator), Simultaneous display of 80 channels on one monitor in different modes and up to 320 channels in one system, intelligent GUI, and remote control up to 16 DVRs.

### — About AVerMedia INFORMATION, Inc.

AVerMedia INFORMATION, Inc. is the technology leader in surveillance and presentation technology. Aside from its full line of digital surveillance recorder products, AVerMedia provides Embedded Hybrid DVR, NVR, Megapixel IP cam, Surveillance Software, Accessories and Peripherals for customer and surveillance market. Keeping the spirit of "Distinct people, Distinct needs - Outstanding Solutions," AVerMedia not only provides you with the fullest coverage of security protection, but also takes video surveillance to the new heights.
